

Since 1985, SLS Lighting is dedicated in providing the lighting industry in BC with the highest quality and innovative products available.

## Leviton Wireless Lighting Control Products Named Best Lighting Control Product of the Year by Consulting-Specifying Engineer Magazine

Wireless lighting control product takes home the gold

Leviton Manufacturing Company's wireless lighting control products were chosen by Consulting-Specifying Engineer (CSE) magazine as one of the Best Products of the Year. The high-performance occupancy sensors combine Leviton's legendary styling and superior performance features with reliable wireless technology. The result is a "green building product" that offers significant energy-savings and reduced installation costs for both retrofit and new construction applications.

CSE Judges selected up to 5 finalists in each of 10 categories, and determined their ranking as gold, silver or bronze. Judges comprised of professional engineers who regularly design and specify HVAC, electrical, fire protection and plumbing systems awarded Leviton a prestigious gold level ranking.

"We are pleased that Consulting-Specifying Engineer magazine subscribers have chosen our wireless products as the Gold award winner in the lighting control products category," said Richard Westfall, Vice President and General Manager for Leviton's Lighting Management Systems. "Energy conservation has never been more important, from both an environmental and economic perspective. This award illustrates our commitment to providing innovative energy management solutions and maintaining a leadership position in this market."

"The Product of the Year competition illuminates the products design engineers and specifiers are valuing for MEP systems in nonresidential buildings. In this tough economy, construction and operating budgets are under stress while sustainability issues for energy, water, and materials are growing. Flexibility, modularity, efficiency, and durability seemed to be factors shared by many of this year's winners," said Michael Ivanovich, editor-in-chief, CSE, a monthly publication with a circulation of over 46,000 mechanical, electrical, and plumbing (MEP) engineers.

Leviton started out as a producer of mantle tips for the gas lighting industry at the dawn of the electrical era. As electricity became the dominant source of power for homes and businesses, the Company began mass-producing pull chain lamp holders for electric lights, and stands today as an icon and global leader in wiring devices and connectivity solutions. Leviton's product portfolio consists of over 25,000 different products used by homes, businesses, industrial plants and companies that integrate Leviton components and devices into their own products
