ALBUQUERQUE, NM— Insight Lighting has released a new line of solid state lighting products that combines the very latest in LED technology, thermal management and optical performance. The Medley Series is a lighting solution for today's energy conscious environments.

"The SSL lighting industry today is filled with technology companies who place their LED's into enclosures with little regard for the elegance of the fixture, its mounting, or the true quality of the illumination," said Chris Kreuter, Insight Lighting Marketing Manager, Digital and Special Products. "Medley is designed to bring harmony to these elements and offer the lighting designer the most complete selection of white and RGBW lighting products available."

The Medley line is easy to install with a simple plug and play platform and field replaceable light engines. There are three types of Medley devices that are currently available:

- Medley C delivers white light and RGB color changing accents for dramatic room upgrades.
- Medley A is the interior lighting designer's choice, offering linear white and RGBW lighting solutions. Its versatile housing can decorate and illuminate, with the industry's first high performance, direct/ indirect pendant fixture.
- Medley X offers a stylish exterior façade and wall wash option in both color changing and white light. High performance optics can efficiently put light exactly where you want it.

Insight's Medley series delivers on the promise of sustainability, which is music to any designer or architect's ears.

About Insight Lighting
