

INTRODUCING

SLOTLIGHT PRO

Zumtobel has released the next generation of SLOTLIGHT PRO Recessed. While maintaining the original SLOTLIGHT PRO's aesthetic appeal, the fixture's new design now allows for installation in existing ceilings. The luminaire's new profile is straight-edged, and the new fixture offers increased efficiency, ease of installation, and configuration flexibility. SLOTLIGHT PRO does not produce socket shadows or hot spots, therefore creating a uniform, seamless "ribbon" of light. Available in 2 ½" and 4" aperture in both Flangeless (before or after sheetrock) or Flanged, SLOTLIGHT PRO can be installed either individually or in continuous runs.

LIGHT FIELDS

Zumtobel announces the re-introduction of the LIGHT FIELDS® product line. With the addition of two new fixtures (1X1 Recessed and 2X2 Surface-mounted) and the new PF option (for the 2X2 Recessed Cluster and the 1X4 Recessed fixture) the LIGHT FIELDS family offers flexibility and ease of specification. LIGHT FIELDS' Micro-pyramidal Optic offers excellent glare control, and its unobtrusive, clean appearance makes the luminaire ideal for offices, computer rooms, corridors, reception areas, video-conferencing areas, and healthcare applications.
